

Media Ninja: a NinjaSuite App

The Media Ninja converts your streaming video or audio file to a SCORM package, so that you can get a completion in your Learning Management System after the user watches a certain amount of the media.

How does it work?

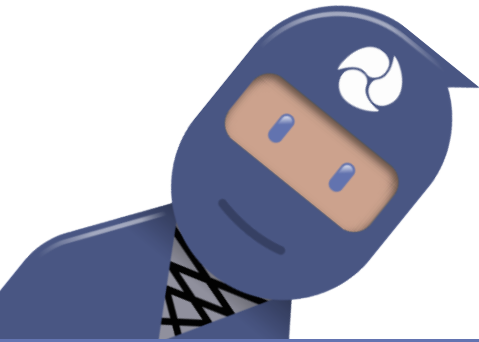

This tool will wrap content that is hosted by streaming providers, such as YouTube and Vimeo, in a special player that knows how far through a user has watched. You can optionally hide the “scrubber” bar (the draggable item that lets users skip ahead or back in a video) so your learners can't skip ahead. You then simply set a condition regarding when to mark the media as completed - typically by setting a time/percentage watched. After that marker is reached, we send a SCORM completion to your LMS.

The Media Ninja is designed to be very easy to use and fast to interact with. It's so easy to tell your LMS how much media a learner has watched and report on the required amount of time spent.

We couldn't find another tool to perform this task, so we built it ourselves. If you're a Teacher, Lecturer, Course Developer, Student or LMS admin etc, then this tool could be for you. No special development skills are required.

Try it today:

<https://www.coursesuite.ninja>

- Fast, secure purchasing via FastSpring
- Your subscription will be charged monthly until cancelled
- Try before you buy - first 7 days are free!
- All apps are desktop browser based and require Firefox, Safari, Chrome, Opera or Vivaldi

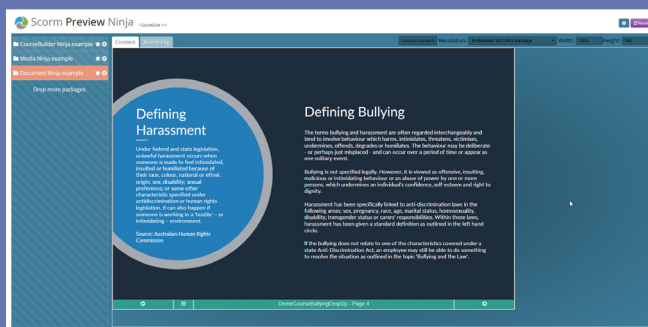

Standalone

MEDIA NINJA

- Very easy to use
- SCORM completion support
- Streaming video support
- Built-in templates
- YouTube, Vimeo & SoundCloud
- HTML5 compliant output

PREVIEW NINJA

Automatically test your settings or output content before testing elsewhere:

Preview multiple versions of your output content before deciding.

Bundled

POPULAR APPS BUNDLE

Includes our most popular NinjaSuite apps:

- Media Ninja
- Document Ninja
- CourseBuilder Ninja
- Preview Ninja

New apps will be automatically added to your subscription once released.

API ACCESS

- Create authentication tokens for accessing and launching apps
- Access all apps and features, including future releases
- Multiple concurrent user licensing
- Volume Licensing option (multiple accounts)
- Add custom templates, white-label apps
- Custom billing options - contact us for information

About Us

We are an innovative eLearning development company focused on developing a suite of great online web apps that allow rapid creation of interactive and intuitive HTML5-based SCORM courses. We also release Open Source plugins for Moodle, and produce online course content.
